Summary

Computer Science undergraduate (B.Tech, 2027) who turns complex data into clear insights and decisions. Proficient in SQL, Power BI, and Python for data cleaning, KPI reporting, and dashboard design, backed by strong DBMS and problem-solving fundamentals (300+ DSA problems solved). Clear communicator seeking a Business Analyst role to drive data-informed decision making.

Education

Rajiv Gandhi Institute of Petroleum Technology Aug 2023 – May 2027
Bachelor of Technology in Computer Science – CPI: 7.22 *Amethi, India*

Skills

Analytics & Reporting: SQL, Power BI, DAX, Power Query, Python, Data Cleaning, KPI Tracking, Dashboards, ROI Analysis
Databases: SQL Server, PostgreSQL, MySQL, MongoDB, DuckDB, Schema Design, Indexing
Programming: Python, C++, JavaScript, TypeScript, React.js, Node.js, REST APIs
Tools & Platforms: Git, GitHub, Docker, Streamlit, Postman, Vercel, Linux
AI / GenAI: LLM APIs (Gemini), Prompt Engineering, Text-to-SQL, LangChain
Core Skills: Data Analysis, Problem Solving, Documentation, Communication, Teamwork, DBMS, DSA

Experience

GreedUp June 2026 – August 2026
Data Science Intern

- **Real-Time AI Meeting Assistant** *(Python, Whisper, Silero VAD, LLMs)*: contributed to an application that turns meeting conversations into transcripts, summaries, and action items.
- Prepared audio for the transcription pipeline (OpenAI Whisper, Silero VAD) and worked on LLM-based summarization and action-item extraction to turn unstructured conversations into structured output.
- Tested outputs on varied recordings, identified accuracy issues on noisy audio, and documented and debugged the problems found.

Projects

CredResolve – Collections Intelligence Dashboard | *Python, SQL, HTML, CSS, JavaScript* 2026

- Developed a collections dashboard tracking recovery rate, PTP kept rate, recovery per agent-hour, and cost per rupee recovered to support collection strategy decisions.
- Built a recovery funnel (Targeted → Contacted → RPC → PTP → PTP Kept → Paid) and compared reported vs. independently calculated recovery, flagging data issues such as duplicate payments and attribution conflicts.
- Compared collection channels (Telephony, Agents, AI Voice, WhatsApp, Field) on cost, recovery estimates, and ROI.

End-to-End Loan Analysis Dashboard | *Power BI, SQL Server, DAX, Power Query* 2026

- Built a 3-page interactive Power BI dashboard (Loan Overview, Applicant Demographics, Financial Risk Metrics) covering default rates, credit score categories, and customer demographics.
- Created DAX measures for YoY loan and default change, YTD analysis, and validation KPIs; used slicers, Decomposition Tree, and Sankey visuals to drill into default drivers.
- Cleaned and transformed raw loan data using Power Query and SQL Server to build reusable datasets for reporting.

AI-Powered Data Storage Optimization Advisor | *Python, Streamlit, YAML, DuckDB, Docker* 2026

- Built an explainable, rule-based system that turns business and workload requirements (growth, latency, availability, security, budget) into a role-based storage architecture (system of record, cache, analytics, archive, backup).
- Designed a YAML knowledge base of decision rules to select optimization techniques (indexing, partitioning, compression, replication), with rule traceability, confidence scoring, and trade-offs.
- Delivered a Streamlit dashboard with JSON/Markdown/Mermaid reports and DuckDB analysis of a 1,000-row synthetic dataset, packaged with Docker and automated tests.

Achievements

- **Hack4Delhi 2026:** Grand Finalist and Certificate of Excellence recipient.
- **Myntra Hackathon 2024:** Top 4% after ideation phase. **LeetCode:** 300+ DSA problems solved in C++.
